

What Does MIRACLES Mean to Me?

The beginning of my experience started when I was in 1st grade then I first started to go to the Club. There was a second computer lab by the small gym that we could play games and do other stuff. The kind woman that taught me a lot of the basics of computers was named Helen. She was very nice to me and had a lot of patience with me. Once I won a contest and she gave me an award. Another time, she gave me a lesson about how to use a computer and that is what got me into joining MIRACLES.

My other friend Tia also helped me make up my mind. She said “Hey Daniel there is a new academy in the other lab by the big gym. It has something to do with computers and I know that you like computers so I thought that you would be interested in joining.” Tia and Helen were the ones that helped me get into this great academy.

After I joined MIRACLES, Jacob was the one that helped me find out what computers are all about. He was the one that showed me how to work and identify all the parts of the computer. I have been in MIRACLES for two years and last year he took me to Hewlett Packard. It was really, really cool. At Hewlett Packard we saw the clean room where everything had to be perfect or the micro chips wouldn't work. We also saw the rooms where they make the ink for the printers. Also I saw the biggest printer in production and they even demonstrated how it works.

Our trip this year is going to be a real live recording studio. We are planning to see live bands record their music. I am interested to see what kind of technology they use to make their recordings. As a reward for our Digital Arts Festivals, we will also be going out for pizza.

A very exciting thing happened this year. I wrote a screenplay of a story about the African elephants for the Digital Arts Festival in movie making you can read it in www.myclubmylife.com and our local website. When my mom and dad found out what happened with my screenplay, they were so proud of me.

Just so you know, I am doing this for all you people that I can call my fans. I really hope that you will like this story. Now I am in the progress of building my own computer. Also I have just finished a website that you can see by going to www.bgc-albany.org and click on the local entries link.

In a couple of weeks, I should be finished with my desktop wallpaper project for Design Tech. I hope that this will go to TV or even the news paper. I hope that you have enjoyed all of my sweat breaking work and thank you for all of your support.

Sincerely,
Daniel Delgadillo
